Bizora

ONE PLATFORM. EVERY BUSINESS.

Built around your business, not a generic template.

One organised workspace

Every customer, job, payment and note in one place — on the web dashboard and on the Android app. Nothing depends on one person’s memory.

Configured for your trade

Start from a business template, then use your own words, your own stages and only the modules you actually use. It adapts to the business, not the other way round.

A clear picture every morning

New orders, due today, overdue, in progress, outstanding and collected today — the six numbers that run your day, reported in your business timezone.

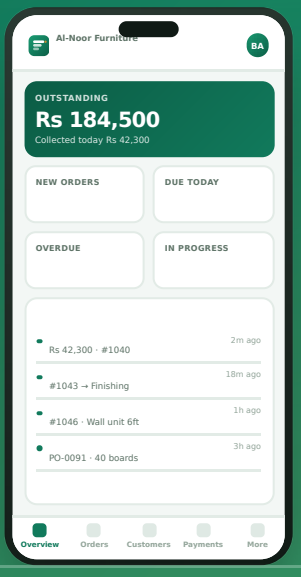

Your team, with the right limits

Invite staff with roles and granular permissions. Every privileged action is written to an audit history you can check.

BUSINESS TEMPLATES

Tailor · Furniture · Carpenter · Auto Workshop · Printing · Generic

Each template sets the terminology, modules, item types and workflow stages a business starts from. New business types are configured on the platform rather than built from scratch.

01 Tell us your business

What you do, what you sell, who works with you. We pick the template that fits — or start from a configurable workspace.

02 We configure your workspace

Modules, workflow stages, item types, payment methods, custom fields and your branding. Your words, your process.

03 You run it, everywhere

Sign in on the web or the Android app, invite your team, and watch every job move stage by stage.

Bizora

A business management platform that gives your business one organised workspace for customers, orders, jobs, payments and accounts — configured to the way you already work.
